

LAPTOP COMPUTER PAPER SUPPORT DEVICE

ABSTRACT OF THE DISCLOSURE

[0038] A laptop computer paper support device for removably setting on the top of a laptop computer case and for holding at least one document above a screen on a laptop computer. The laptop computer paper support device comprises a support member and shelf member. The support member includes a front surface, a top edge, a bottom edge, a left edge, a right edge and a connection axis passing through the left edge and the right edge. The connection axis is substantially perpendicular to the left edge. The shelf member is pivotally attached at the connection axis to the front surface of the support member. The shelf member includes a top surface and a bottom surface. The shelf member also includes a shelf ledge adapted for maintaining a document upon the top surface of the shelf member. The shelf ledge is attached to the top surface and extends upwardly from the top surface at a non-zero angle. The shelf member further includes a shelf flange adapted for setting on the top of a laptop computer case. The shelf flange is attached to the bottom surface and extends downwardly from the bottom surface at a non-zero angle. The shelf member is moveable between an open position where the shelf is substantially perpendicular to the support member and a closed position where the shelf member is substantially parallel to the support member.
